Rostock, Germany

Computer science master's student in Rostock, working as a research assistant on LLM agents and on IoT sensor systems for animal health, and as a software engineer modernising the software of a 920-berth marina. Comfortable from microcontroller firmware up to Django backends, and most interested in systems that have to keep working outside a demo.

EXPERIENCE

Yachthafenresidenz Hohe Düne

Jul 2026 - Present

Software Engineer (IoT/ERP/POS)

Rostock, Germany

- Architecting, integrating and developing a new ERP/POS system, including migration to a new database, to replace a legacy platform and modernise operations for a 920-berth marina, the largest in Mecklenburg-Vorpommern and one of the largest in Germany, with the goal of creating a digital twin of the marina.
- Handling end-to-end requirements engineering, working directly with management and stakeholders to translate business operations into the technical migration roadmap.

Fraunhofer IGD / University of Rostock

Feb 2026 - Present

Research Assistant · KI-TIERWOHL, work package AP 6

Rostock, Germany

- Work package AP 6 (technologies for welfare recognition) of KI-TIERWOHL, a €5 million excellence-research consortium of eight work packages, funded from the ERDF programme of Mecklenburg-Vorpommern; seven consortium partners and four associated partners.
- Built the calf smart jacket: detects respiratory problems in calves from audio and accelerometer data, using contactless welfare indicators.
- Ran measurement campaigns at consortium partner FBN Dummerstorf; built the data pipelines, annotation and ML workflows in PyTorch, OpenCV and CVAT.

University of Rostock, Chair of Software Engineering

Dec 2025 - Present

Research Assistant

Rostock, Germany

- Researched, built and benchmarked custom AI agents for legacy code understanding across Python and Java codebases (AI4SE), and developed a Java2PlantUML tool.
- Built the evaluation dataset and implemented the system in Python on the Hugging Face stack.

Ossinity GmbH

Nov 2025 - Jun 2026

AI Developer

Rostock, Germany

- Annotated MRI scans in 3D Slicer for AI-assisted cancer detection, and ran evaluation and testing in Python.

University of Rostock, Chair of Integrated Systems

May 2025 - Nov 2025

Teaching Assistant

Rostock, Germany

- Planned, recorded and edited modular teaching videos on computer architecture for reusable course formats.

University of Rostock, Juniorstudium

Sep 2023 - Nov 2025

Tutor

Rostock, Germany

- Taught 30+ prospective computer science students per semester in AI basics, mathematics, logic and programming: tutorials, exercise sessions and hands-on labs.
- Wrote the course materials.

PROJECTS & COMPETITIONS

Summer of Solutions · The Future Living and Fraunhofer IGP

Apr 2026 - Jul 2026

Practice-transfer project with Nordwasser GmbH

- Responsible for technical concept, architecture and data protection in a team of five master's students; one of 13 practice partners and 60+ students in the 2026 cohort.
- Designed a vendor-independent telematics concept for 138 vehicles over OBD dongles, keeping the data in-house; delivered a 40+ page specification with a cost-benefit calculation, CO₂ estimate and rollout plan.

AI Hackathon, Cheftreff Hamburg

Apr 2026

Case by Finanz Informatik · Top 3 of 300+ participants

- "Aline", an AI assistant wired into Jira, GitHub and Teams that helps the business side with requirements during development.

Healthcare Hackathon Berlin

Jul 2026

Case with caire

- Estimated vital parameters from video (remote PPG), with LLM-based evaluation and alerting tied into the patient history.

OPEN SOURCE

rfidpoll

2026

Published by FBN Dummerstorf, out of the KI-TIERWOHL project

- Reads FEIG OBID RFID readers over TCP and writes every detected tag to CSV; built for gapless capture, deduplicating across restarts. Runs as a systemd service with a YAML config and a mock reader for hardware-free testing.
- In use in a year-long animal behaviour study in the barn.

ArbiterMed-MCP

2026

MCP server for evidence-based medical research

- Extracts hazard ratios and p-values from studies as structured data and rates how directly a study answers the question asked (PICO directness). No dependencies.

EDUCATION

University of Rostock

Oct 2025 - Present

M.Sc. Computer Science, focus on AI, software engineering and IoT

Current average 1.7 (German scale); expected Apr 2027

University of Rostock

Oct 2020 - Oct 2025

B.Sc. Computer Science

Final grade 2.4, thesis 1.3; extended while working to support family

Schulcampus Evershagen, Rostock

until Jun 2020

Abitur

TECHNICAL SKILLS

Languages	Python, Java, C/C++, SQL, TypeScript
ML & AI	PyTorch, OpenCV, Hugging Face, LLM agents, MCP, ReAct prompting, CVAT
Backend & Data	Django, PostgreSQL, SQLite, MongoDB
Embedded & Tools	ESP32, Arduino, Raspberry Pi, Linux, Docker, Git
Spoken	German (native), English (C1), Spanish (basic)

VOLUNTEERING

NALA AI: open-source developer on AI-assisted water monitoring, shown at re:publica 2026. BYTE Challenge: free online STEM courses for disadvantaged school students, under the Gesellschaft für Informatik. Student council (StuRa), University of Rostock. Member, Gesellschaft für Informatik e.V.
